Summary

Manage Docker container images in a fully managed private registry. Push private images into this registry to run them in IBM Cloud Kubernetes Service and other runtime environments. Images are checked for security issues, so that you can make informed decisions about your deployments.

Features

Highly available and scalable private registry

Set up your own image namespace in a multi-tenant, highly available, scalable private registry that is hosted and managed by IBM. Securely store your private Docker images and share them with users in your IBM Cloud account.

Image security compliance with Vulnerability Advisor

Benefit from the automatic scanning of images in your namespaces. Review suggestions, which are specific to your operating system

Store and distribute container images in a fully managed private registry

Push private images to run them in IBM Cloud Kubernetes Service and other runtime environments.

[Get started](#)

Explore our capabilities

Threat insights

Advanced capabilities like vulnerability scanning, deployment policy enforcement, and comprehensive risk assessment and prioritization provide security compliance insight and controls over static images and live containers.

Integration

The IBM Cloud preferred image registry, which is integrated with IBM Cloud Kubernetes Service for your DevOps workflow by using a toolchain or your existing CI/CD toolset.

Security

IBM Cloud Container Registry is integrated with Identity and Access Manager and resource groups to provide fine-grained access controls to users within your IBM Cloud account. Integration with Docker Notary provides image signing capabilities.
